Frostbite Symptoms, Treatment, and Prevention

Drs. Foster & Smith Educational Staff

Frostbite most commonly affects the tips of the ears, the tail, the scrotum, and the toes. Normally, blood flow keeps these areas warm. However, when a body area becomes extremely cold, its local blood vessels constrict to help the body conserve heat. The tissues then have even less blood supply and can eventually become as cold as the surrounding air. If the tissue freezes, it dies.

IS YOUR DOG AT RISK?

Dogs housed outdoors are extremely susceptible to frostbite. They absolutely require warm, dry housing. Indoor dogs – especially small and/or short-haired dogs – are also at risk. Certain medications and medical conditions can increase susceptibility to frostbite. Protect your pet from frostbite with warm pet clothing and boots. Plus, shelter her from the wind.

FROSTBITE SYMPTOMS

Frostbitten tissue may initially appear pale or gray, as well as hard and cold. As the area thaws, it may turn red. Thawing is very painful. If frostbite is severe, tissue will eventually turn black and slough off.

VETERINARY TREATMENT

Your veterinarian will examine the affected area, although total damage may not be evident for several days, and prescribe pain relief medication and <u>antibiotics</u>. Your dog will also be evaluated for hypothermia. Severe frostbite may necessitate amountation. Prevent pain and suffering this winter keep your personal pains and suffering this pains and suffering this winter keep your personal pains and suffering this winter keep your personal pains and prescribe pains are presented as a suffering this winter keep your personal pains and prescribe pains are prescribed as a suffering this winter keep your personal pains are prescribed as a suffering this winter when the pains are prescribed as a suffering this winter keep your personal part of the pains and prescribed as a suffering this winter when the pains are prescribed as a suffering this winter when the part of the pains are prescribed as a suffering this winter when the part of the pains are prescribed as a suffering this winter when the pains are prescribed as a suffering this winter when the part of the pains are prescribed as a suffering this winter when the part of the pains are prescribed as a suffering this winter when the pains are prescribed as a suffering this winter when the part of the pains are prescribed as a suffering this winter when the pains are prescribed as a suffering this winter when the part of the pains are prescribed as a suffering this winter when the pains are prescribed as a suffering the pains are prescribed as a suffering this winter when the pains are prescribed as a suffering the pains are prescribed as

IMMEDIATE TREATMENT

Treat frostbite with extreme care:

- Warm the affected area rapidly with warm (NEVER HOT) water. Apply warm, wet compresses or soak the affected area. Do NOT use a heating pad or hair dryer.
- Gently, thoroughly dry the warmed area.
- NEVER rub or massage frostbitten tissue.
- Contact your veterinarian for an immediate examination. Wrap your pet in a warm towel or blanket before transporting her.
- Do NOT warm a frostbitten area if you cannot keep it warm.
- Do not give pain medication.

amputation. Prevent pain and suffering this winter; keep your pet warm, dry, and safe from frostbite.
